SECURITY RISK RATING DEFINITIONS

Security risk rating is based on the likelihood that a country, region, or city will experience political instability, civil unrest, or conflict. The rating is determined by the potential for civil unrest, political instability, and the likelihood of conflict. The rating is based on the potential for civil unrest, political instability, and the likelihood of conflict.

These ratings are based on the potential for civil unrest, political instability, and the likelihood of conflict. The rating is based on the potential for civil unrest, political instability, and the likelihood of conflict.

MEDICAL RISK RATING DEFINITIONS

The medical risk rating can vary widely depending on the medical infrastructure, availability of medical services, and the availability of medical supplies. The medical risk rating is based on the availability of medical services, the availability of medical supplies, and the availability of medical infrastructure.

The medical risk rating can vary widely depending on the medical infrastructure, availability of medical services, and the availability of medical supplies. The medical risk rating is based on the availability of medical services, the availability of medical supplies, and the availability of medical infrastructure.

L₁
